

Abstract

A storage page for the display of compact discs and photographs, having a back sheet attached to a cover sheet to create one or more pockets for storage of photographs or compact discs. The cover sheet has a slit for insertion of the photograph or compact disc into the pocket. Selective joining of the back sheet and cover sheet create means to assist in holding the photograph or compact disc in place. The page preferably is substantially rectangular, and may have one edge hole-punched for inserting in a loose-leaf binder. The page also may include a memo area for the recording and display of notes, descriptions and other indicia.
